

SVRN Clinical Systems LLC - Executive Briefing

The \$320,000 Capital Hemorrhage on High-Acuity Units

NSI Benchmark: \$60,090 per RN exit - direct loss

5-nurse cohort = \$320k unpriced capital hemorrhage

Root Cause: Continuous sympathetic dominance without recovery

Workaround mastery = asset depreciation. Exit = lagging receipt

Annals Meta-Analysis: <4-week interventions fail to alter burnout

Solution: SVRN In-Shift Autonomic Infrastructure

- In-Shift Buffering: biological recovery valves in active ops
- Zero-Workflow Disruption: preserves throughput, zero admin friction
- Hard-Metric Readout: Day 30 ROI report - capacity & risk

30-Day Institutional Validation - Capped Deployments Q3/Q4 2026
